

Auto Power Management

For Windows Vista or Windows 7 Desktop and Laptop

PART A

1. Start > Control Panel > Power Options
2. Choose “Power Saver” then click on “Change plan settings”
3. Set “Turn off the display” to 5 minutes then click on “Change advanced power settings”
4. Expand the + Sleep option and change the following settings:
 - Sleep after
Setting: 10 minutes
 - Hibernate after
Setting: 20 minutes

PART B

5. Start > Control Panel > Hardware and Sound > Device Manager
6. Expand the > Network adapters option then double click on the “Intel (R) Ethernet Connection”
7. Select the Power Management tab
8. Uncheck “Allow the computer to turn off this device to save power”
9. Click “OK” and you are good to go!
